SAVE ENERGY & MONEY

Get a new hi-efficiency gas or electric furnace.

You will be pleasantly surprised of your savings.

Ask about the benefits of a heat pump system

NWHC is pleased to take
\$200 OFF
Installation of any
****High-Efficiency System**
**(Meets rebates)

*Avista is still offering rebates as well, but hurry before they come to a close.

10 ENERGY SAVING TIPS FOR WINTER HEATING

1. Change your filters every 3 months or sooner, (*check for buildup on filter.*)
2. Reduce your room temperature a degree or more.
3. Turn the temperature down on your hot water tank.
4. Be sure that your water tank & pipes are insulated.
5. Open curtains on sunny days and close at night.
6. Have your equipment maintained annually.
7. Replace your older system with higher efficiency.
8. Inspect your ductwork for leaks or insufficient insulation, this will be the most heat lost.
9. Close flues on fireplaces when not being used.
10. Using your humidifier will help keep warm moisture in the air

EARLY BIRD SPECIAL
GET YOUR AIR CONDITIONER OR

When Your Furnace or Air Conditioner is Down, N W Heating and Cooling Inc Will Get it Up and Running in No Time!

It's 7 a.m. in the middle of January, and you and your family have just waken up in a cold house. You take a quick trip to the basement to find that your furnace is not working, or perhaps the fan is running, but cold air is coming from your vents. What do you do? There are many things you need to consider when choosing a company to repair your furnace: convenience, reliability, quality, integrity, and a fair price to name a few. One heating, ventilation and air conditioning (*hvac*) repair company delivers all those things and more — N W Heating and Cooling Inc.

Think about the things that are important to you. Time for example. Your time is valuable and your hvac repair company should value your time as much as their own. Shouldn't the company for your furnace or air conditioner repair arrive at your home when they say they will? N W Heating and Cooling Inc. **GUARANTEES** on-time service. What's more, we also complete nearly all of our repairs the same day that they are scheduled.

Your hvac company should give you a clear explanation of what is wrong with your equipment, and what the cost of the repairs will be. The technicians at N W Heating and Cooling Inc will be happy to sit down and explain to you why your equipment isn't functioning properly. They will cover every aspect of your repair in detail, so you know everything that is going on and what to expect. Your N W Heating and Cooling Inc technician will also explain all the options you have with your equipment — from repair to replacement. Most importantly, we will give you an accurate upfront quote as to how much the repair will cost. We charge by the job, not by the hour. Whatever our technicians quote you is exactly what you will pay, no matter how long it takes us to complete the repair. You never have to be afraid of hidden costs or a repair job that drags on and on while the meter keeps running.

Repair should not take multiple days or multiple visits. It is important that your repair be done right the first time. You can rest assured that N W Heating and Cooling Inc technicians will do the job right and clean the first time. Our technicians are among the most knowledgeable and experienced in the business. Our technicians are familiar with ALL types of hvac equipment and have the skills and equipment to perform virtually any repair. Best of all, our technician's stand by their work. If your repair is not done to your satisfaction, they will do whatever it takes to get the job done right.

Furnace and air conditioner repair can be a messy job. Your repair should be done by technicians who have respect for you and your home. Choose a company whose technicians treat your home with the same level of care they would if they were servicing their own home; choose N W Heating and Cooling Inc! Our technicians thoroughly clean up after they are finished with your repair. The only sign that you will see when they are done is a properly functioning hvac system.
